

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions and listings of claims in the application.

**COMPLETE LISTING OF THE CLAIMS:**

Claims 1-9 : (Canceled)

Claim 10 : (New) A computerized device for creating, in a graphical environment, Intelligent Network (IN) services for a broadband integrated services digital network/intelligent network (B-ISDN/IN), the device being adapted to provide building blocks and comprising:

a picture editor for selecting the building blocks and linking the selected building blocks, and generating a general logic description of a service in form of a picture file; and

a code generator for converting the picture file into runtime files required to execute the service on a Broadband Service Control Point, the building blocks being a collection of broadband specific actions, data access and data manipulation routines plus pictorial blocks that define a graphical layout of the service.

Claim 11 : (New) The computerized device of claim 10, wherein the building blocks are broadband intelligent network application protocol (B-INAP) dependent generic service building blocks (GSBB) for handling functions required by the B-INAP.

Claim 12 : (New) The computerized device of claim 10, wherein the building blocks are generic service building blocks (GSBB) for running a specific message sequence which is interruptible by an asynchronous event; and wherein, once the event is handled, an original message sequence is resumable, and the device is operative for generating service logic programs (SLPs) for supporting a finite state machine.
